Characteristi
STOL® 95 is a

STOL® 95 is a CuCrZr alloy that can be hardened by cold forming and by precipitation of CuCrZr - phases during a heat treatment. It has good bendability, excellent hot and cold forming properties, a high strength and a good corrosion resistance.

Due to the CrZr-precipitations the relaxation properties, even at temperatures up to 250 °C are excellent. The electrical and thermal conductivity is excellent. Welding, soldering and brazing properties are good too.

Chemical Composition (Balance) Weight percentage
